If more than one contigg was formed, the clone was designated 'Contamination'. The contigg and singletons were blasted against CDS plus pseudogenes from the IIGRv5 annotation, and the resulting AGI code is presented if more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta, Spermatophyta, Magnoliophyta, eudicotyledons, core eudicotyledons, rosids, eurosids II, Brassicales, Brassicaceae, Arabidopsis.

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G. Genoscope members carried out sequencing and annotation : Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGV INRA : Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). S prime and 3 prime are assembled with Phrap.

Definition of the terms used to describe the quality of the clone: The about 220 sequences from the clone collection were sorted according to clones and clustered. If more than one contig was formed, the clone was designated 'Contamination'. The contigs and singletcons were blasted against CDS plus pseudogenes from the TIGRYS annotation, and the resulting AGI code is presented if more than 90 percent identity was found. The sequences were also blasted against all TIGRYS introns, and matches longer than 50 bp with 95 percent identity are reported as 'intron found'. The remaining terms for SeqAnalysis describe the outcome of the evaluation of the CDS detected after pairwise alignment with CDS plus pseudogenes from the TIGRYS annotation file. The sequences or contigs for which a full CDS with or without STOP codon was detected, a BLASTP against all TIGRYS proceed sequences was performed. Full perfect: 100 percent identity, full good: better than 95 percent identity over less than 95 percent of the sequence; weak similarity: less than 95 percent of the sequence; weak similarity: less than 95 percent of the sequence; that the collection contains a few clones for which that the collection contains a few clones for which the the collection contains a few clones for which sequencing was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /lab hose="000-G10"

It is a filamentous ascomycete with a haploid genome (n=7) of approximately 40 Mbp. Rice blast is an important model fungal pathogen for studying numerous aspects of the fungal-host interaction. In order to facilitate genome wide analysis, a BAC library containing 9216 clones with an average insert size of 130 kbp was constructed. This library represents greater than 25X genome coverage. High density colony filters are available upon request."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1, Ap
